

Project Design Phase-II Technology Stack (Architecture & Stack)

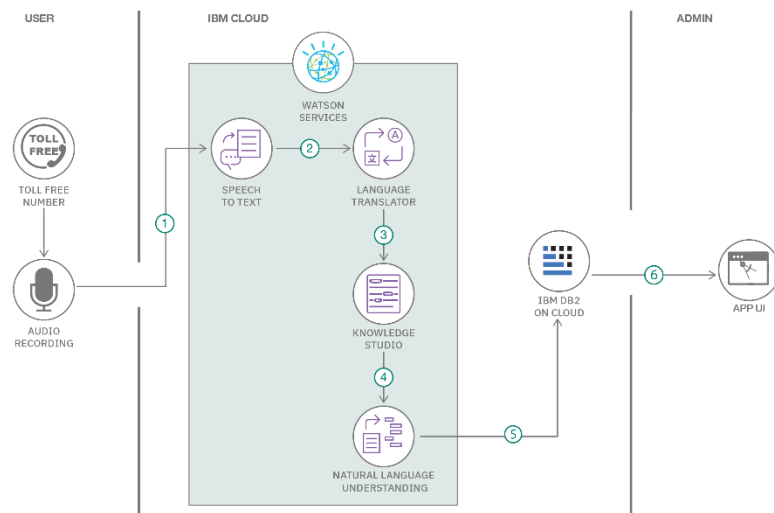

Date	02 October 2026
Team ID	SWTID-2026-7899
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Project Architecture: Employee / IT Support User → ServiceNow Incident Form → Incident Record → Flow Designer → Keyword-based Classification → Category & Subcategory Update → Email Notification → IT Support Review.

Reference: ServiceNow Flow Designer documentation

Guidelines:

- Include all the processes (As an application logic / Technology Block)
- Provide infrastructural demarcation (Local / Cloud)
- Indicate external interfaces (third party API's etc.)
- Indicate Data Storage components / services
- Indicate interface to machine learning models (if applicable)

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	Employees and IT support staff use the ServiceNow interface to create, view and update incident records.	ServiceNow UI / Incident Form
2.	Application Logic-1	Captures incident details and creates the incident record.	ServiceNow Incident Management
3.	Application Logic-2	Checks configured keywords and conditions in the incident details for automatic classification.	ServiceNow Flow Designer
4.	Application Logic-3	Updates category and subcategory and triggers the configured notification after processing the incident.	ServiceNow Flow Designer / Notifications
5.	Database	Stores incident details, category, subcategory and related workflow information.	ServiceNow Incident Table
6.	Cloud Database	Stores application data within the ServiceNow cloud platform.	ServiceNow Platform Database
7.	File Storage	No separate file-storage service is required for the core workflow.	Not Applicable
8.	External API-1	No external API is used in the current project scope.	Not Applicable
9.	External API-2	No second external API is used in the current project scope.	Not Applicable
10.	Machine Learning Model	The project uses configured keyword and rule-based classification; no machine learning model is used.	Not Applicable
11.	Infrastructure (Server / Cloud)	The application is configured and executed within a ServiceNow cloud instance.	ServiceNow Cloud Platform

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	No separate open-source framework is used. The solution uses native ServiceNow platform capabilities.	ServiceNow Flow Designer
2.	Security Implementations	Access to incidents and configuration is controlled through ServiceNow user roles and permissions.	ServiceNow Roles / ACLs
3.	Scalable Architecture	The workflow is configuration-based and can support additional classification rules and incident records within the ServiceNow platform.	ServiceNow Flow Designer

S.No	Characteristics	Description	Technology
4.	Availability	The solution is available when the configured ServiceNow instance and required platform services are available.	ServiceNow Cloud Platform
5.	Performance	The workflow uses condition-based classification and avoids unnecessary processing by applying configured rules to submitted incidents.	Flow Designer Conditions and Actions
