

Project Design Phase-II

Data Flow Diagram & User Stories

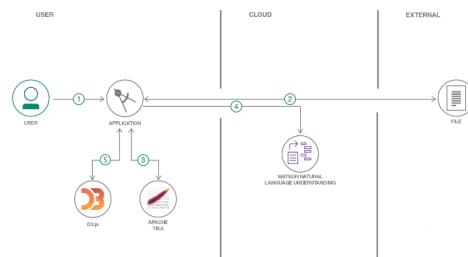

Date	02 October 2026
Team ID	SWTID-2026-7899
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) illustrates how incident information enters the ServiceNow system, how Flow Designer processes the submitted details for classification, and how the classified incident is stored and made available to the IT support team.

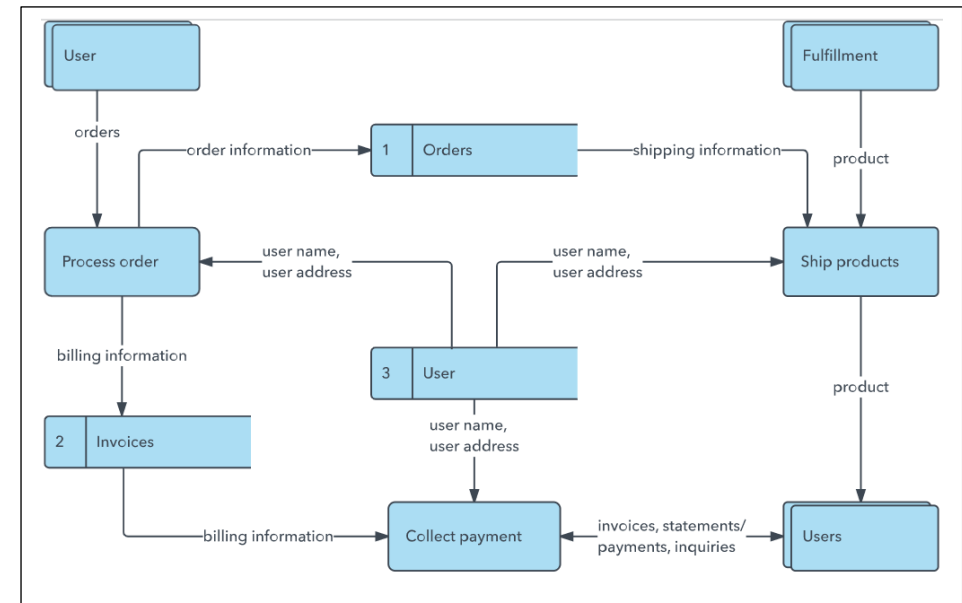

Example: (Simplified)

Flow

1. User configures credentials for the Watson Natural Language Understanding service and starts the app.
2. User selects data file to process and load.
3. Apache Tika extracts text from the data file.
4. Extracted text is passed to Watson NLU for enrichment.
5. Enriched data is visualized in the UI using the D3.js library.

Example: DFD Level 0 (Industry Standard)

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Employee (Requester)	Incident Submission	USN-1	As an employee, I can submit an IT incident with a short description and required details in ServiceNow.	Incident record is created with the submitted details.	High	Sprint-1
	Automatic Classification	USN-2	As an employee, I want the incident category and subcategory to be populated automatically based on configured keywords.	Flow Designer updates the category and subcategory when a configured keyword rule matches.	High	Sprint-1
	Incident Confirmation	USN-3	As an employee, I want to receive an email notification after submitting an incident.	Configured notification is sent with incident reference/details.	Medium	Sprint-1
	View Incident	USN-4	As an employee, I can view the submitted incident record and its classification.	Incident record displays the submitted description and classification fields.	Medium	Sprint-2
IT Support Team	Review Classification	USN-5	As an IT support team member, I can review automatically classified incidents.	Support staff can view incident details and category/subcategory for handling.	High	Sprint-2
	Correct Classification	USN-6	As an IT support team member, I can correct a category or subcategory when the automated result needs review.	Authorized staff can update classification fields on the incident record.	Medium	Sprint-2
Administrator	Maintain Classification Rules	USN-7	As an administrator, I can maintain the configured keyword conditions and Flow Designer logic.	Updated flow conditions can be tested and activated without changing the incident submission process.	High	Sprint-2

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
	Validate Workflow	USN-8	As an administrator, I can test incident scenarios to verify automatic classification and notifications.	Test cases confirm matching keywords update fields and configured notifications behave as expected.	High	Sprint-2
