

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	02 October 2026
Team ID	SWTID-2026-7899
Project Name	Auto Ticket Classification using Flow Designer in ServiceNow
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Incident Submission	Employee submits an IT incident with a short description and required details through the incident form.
FR-2	Automatic Ticket Classification	Flow Designer evaluates the submitted incident's short description using configured keyword conditions and assigns a matching category.
FR-3	Category and Subcategory Selection	The incident form supports category and dependent subcategory selection; the selected or automatically assigned values are saved to the incident record.
FR-4	Email Notification	A notification email is sent after incident submission, using the configured notification trigger and recipient.
FR-5	Incident Review and Correction	IT support staff can view the incident and its classification, and update category or subcategory when correction is needed.
FR-6	Flow Configuration and Validation	An administrator can maintain classification conditions and test sample incidents to verify expected category assignments and notification behavior.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The incident form should use clear field labels and a straightforward submission flow so employees can report issues with minimal effort.
NFR-2	Security	Access to incident records and configuration should follow ServiceNow roles and permissions; users should only access actions allowed for their role.
NFR-3	Reliability	Classification and notification flows should handle configured conditions consistently, and failed or unmatched cases should remain available for support review.
NFR-4	Performance	The classification flow should process a submitted incident promptly without unnecessary delay to the submission experience.
NFR-5	Availability	The solution should be usable whenever the ServiceNow instance and its required platform services are available.
NFR-6	Scalability	The flow and classification rules should support additional incident records and new keyword/category mappings with manageable configuration changes.
