

Project Development Phase Model Performance Test

Team ID	SWTID-2026-7899
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	10 Marks

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot
1.	Metrics	Regression Model: Not applicable – the flow assigns fixed categories by keyword and predicts no numeric value, so MAE, MSE, RMSE and R2 score are not computed. Classification Model: Rule-based keyword classification built with Flow Designer (no trained ML model). Confusion Matrix – not computed (only 1 ticket tested). Accuracy Score – not computed. Ticket SCH0001006 (Short Description “Network issue”) shows Category = Network and Subcategory = Wi-Fi, the expected result for the Network rule (Fig 1). Confirmation emails to the caller are logged in the Emails log (Fig 2). Classification Report – not applicable (no model to report on).	 <i>Fig 1 – Ticket SCH0001006 – Short Description “Network issue”; Category = Network, Subcategory = Wi-Fi</i>  <i>Fig 2 – Emails log – confirmation emails sent to the caller</i>

2.	Tune the Model	Hyperparameter Tuning – Not applicable (no ML model). Refinement done: Subcategory is dependent on Category (Network → Wi-Fi, Hardware → Projector, Access → Forgot Password, Performance → Slow Computer). Filtering verified for Network, Hardware and Performance (Figs 4–6); all 4 mappings are listed in Fig 3. Validation Method – Manual functional testing: create a ticket, check the Category / Subcategory values, and check the confirmation email in System Logs > Emails.	 Fig 3 – Subcategory dependent values  Fig 4 – Category = Network → only Wi-Fi offered  Fig 5 – Category = Hardware → only Projector offered  Fig 6 – Category = Performance → only Slow Computer offered
