

Project Development Phase Model Performance Test

Team ID	SWTID-2026-7899
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	

Model Performance Testing:

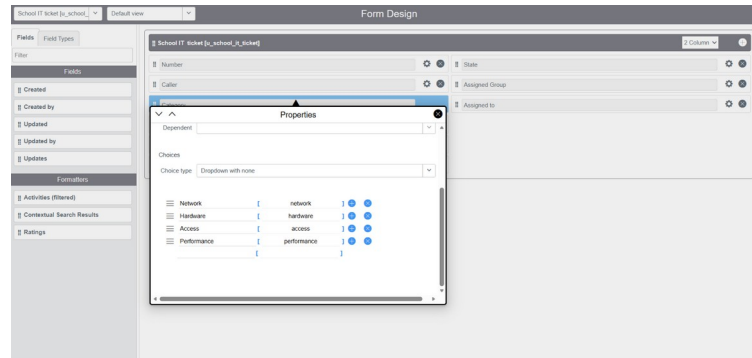

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Data is stored and rendered in the custom ServiceNow table School IT ticket (u_school_it_ticket) with auto-generated ticket numbers. Fields: Number, Caller, Category, Subcategory, Short Description, Description, State, Assigned Group, Assigned to.  <i>School IT ticket table created (label: School IT ticket, name: u_school_it_ticket)</i>  <i>Auto-number enabled for ticket numbers (Controls tab of the table)</i>  <i>Ticket record SCH0001006 rendered in the School IT ticket form</i>

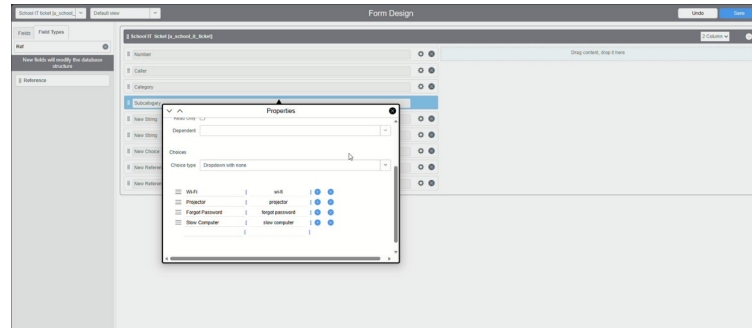

2.

Data Preprocessing

Choice lists were standardized so every ticket is stored in a consistent format: fixed Category and Subcategory values with lower-case backend values (e.g. Wi-Fi = wi-fi).

Category choices standardized (Network, Hardware, Access, Performance)

Subcategory choices standardized (Wi-Fi, Projector, Forgot Password, Slow Computer)

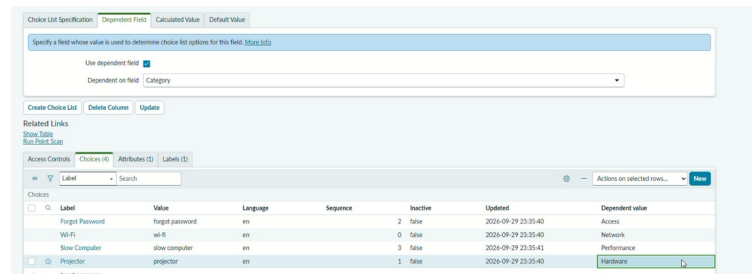

3.

Utilization of Data Filters

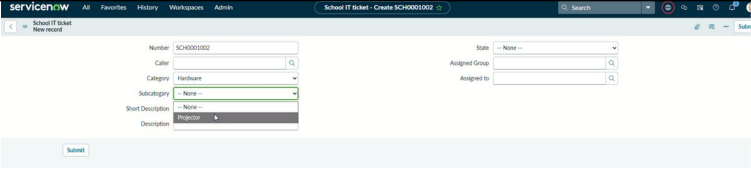

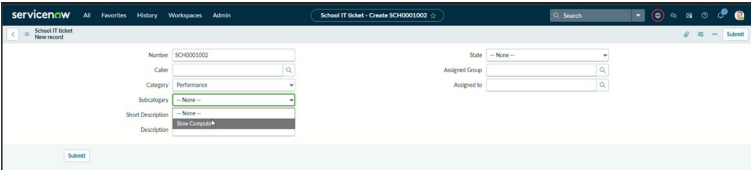

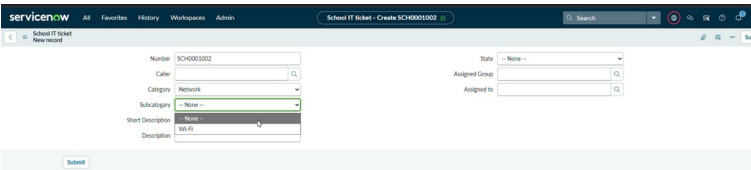

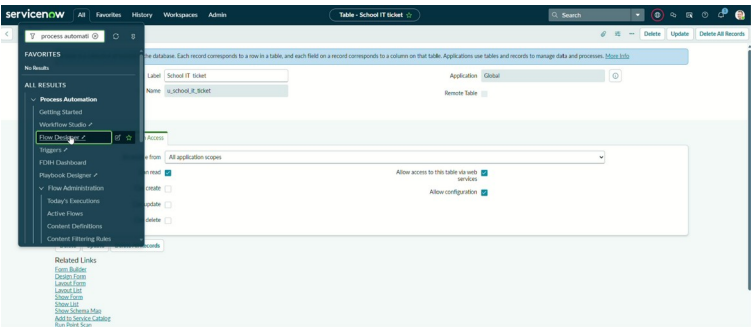

Subcategory is filtered by the selected Category using a dependent field (Dependent on field = Category). Mapping: Wi-Fi to Network, Projector to Hardware, Forgot Password to Access, Slow Computer to Performance.

Subcategory filtered by Category (Use dependent field = Category)

Dependent value mapping for each Subcategory choice

		 Category = Hardware shows only Projector  Category = Performance shows only Slow Computer  Category = Network shows only Wi-Fi
4.	DAX Queries Used	DAX Queries Used: 0 (DAX is a Power BI feature and is not used in this project). Equivalent logic is built with no-code Flow Designer conditions on the Short Description of a new ticket: Wi-Fi or Network sets Network / Wi-Fi; Projector sets Hardware / Projector; Forgot password sets Access / Forgot Password; Slow computer sets Performance / Slow Computer. After classification, a confirmation email is sent to the caller.  Flow Designer opened from Process Automation (used for the classification flow)
5.	Dashboard design	No of Visualizations / Graphs - 0 This is a form-based ServiceNow solution, so no dashboard is used. The user interface is the School IT ticket form with 9 fields (see Data Rendered).
6.	Report Design	No of Visualizations / Graphs - 0 No graphical report is used. The output is the automated confirmation email sent to the caller after a ticket is created.
