

Project Development Phase

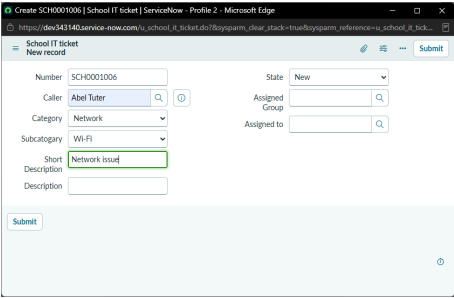

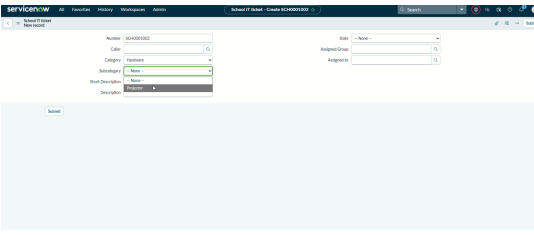

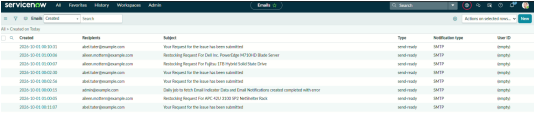

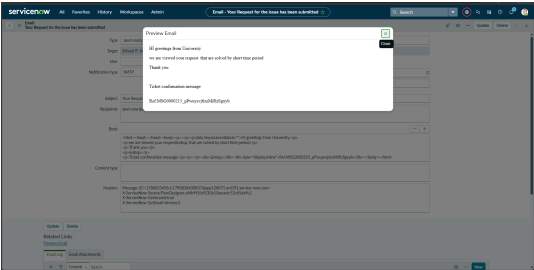

Model Performance Test

Team ID	SWTID-2026-7899
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot
1.	Model Summary	ServiceNow automation setup for ticket management using a custom table (<i>School IT ticket</i>), fields, dependent Category / Subcategory choices and a Flow Designer flow (Auto Classify School IT Tickets). The flow runs when a record is created with Category empty. It checks the Short Description for keywords, sets Category and Subcategory with Update Record actions, and sends a confirmation email to the caller. Note: If the Short Description matches a keyword, Category and Subcategory are filled automatically; otherwise the ticket stays unclassified for manual review. The solution is packaged in <i>Project Update Set</i> (Complete, 43 customer updates) and exported as XML.	 Custom table creation  Dependent Category / Subcategory mapping  Project Update Set marked Complete

S.No.	Parameter	Values	Screenshot
2.	Accuracy	Not applicable: this is a rule-based (keyword) solution built with no-code Flow Designer. No model is trained, so there is no training or validation accuracy. Functional test results: - Network / Wi-Fi ticket: Category and Subcategory stored (test ticket SCH0001006). - Dependent choices: Network shows Wi-Fi, Hardware shows Projector, Performance shows Slow Computer. - Confirmation email generated for each ticket (Emails log).	 Test ticket SCH0001006 (Network / Wi-Fi)  Hardware shows only Projector  Confirmation emails (Emails log)  Preview of confirmation email to the caller
3.	Confidence Score (Only Yolo Projects)	Not applicable: this is not a YOLO / object detection project, so no class detection or confidence score is produced.	-
